

YGE vbar adapter cable

- Adapter for using the YGE controller with vbar-telemetry
- RPM-Output connection for using the vbar-governor
- Length about 10cm

Warranty:

Our warranty conditions are based on the European Statutory Warranty. Any other requirements are excluded. That applies in particular to requirements for damage or injuries compensation due to malfunction or failure. For damages to property or personal injuries and their consequences, which developed from our supply or craftsmanship, we do not take any liability, since we have no control on handling and use.

How can I use YGE-Governor (Mode 2 & 3) with Vbar Control and NEO?

Currently a little trick is necessary for that:

As long as the YGE telemetry-app is active, the following screen is **not visible**:

This page in the Heli setup is missing, when YGE-telemetry is active:

If you want to use the YGE Governor, please proceed as follows:

Disconnect the telemetry-plug from the Vbar first (small white 3-pin JST plug at the side).

Go back into „Edit Heli Assistent“.

Now the page with choosing the Governor is visible.

Please choose „Externer Regler / external Governor“ for YGE-Gov.

Now you can reconnect the telemetry-plug to the NEO.

Please also choose YGE-Governor in the ESC-settings and apply:
