

YGE vbar adapter cable

- Adapter for using the YGE controller with vbar-telemetry
- RPM-Output connection for using the vbar-governor
- Length about 10cm/60cm

Alternatively you can use the attached long one-piece cable with all Aureus, Saphir and 205HVT speedcontrollers. For programming the ESC with the USB-adapter, please use the normal telemetry cable that comes with the ESC.

Warranty:

Our warranty conditions are based on the European Statutory Warranty. Any other requirements are excluded. That applies in particular to requirements for damage or injuries compensation due to malfunction or failure. For damages to property or personal injuries and their consequences, which developed from our supply or craftsmanship, we do not take any liability, since we have no control on handling and use.
